Reducing Hospitalizations

Preventable hospitalizations are a major cost-driver in the medical system. CCBHCs provide integrated mental health care, supported through care coordination and partnerships with other providers and clients. It appears that a CCBHC can significantly lower hospitalizations.

**87% of CCBHCs report a significant decrease in hospitalizations, measured as overall number of hospitalizations they served.**

**While 94% of CCBHCs seen a decrease in wait times. Over three quarters offer same-day services.**

**In early 2017, 8 states started CCBHC programs in a demonstration slated to continue through November 2019. The medical model completed 12 states to date in early October. This infographic summarizes preliminary findings in 4 key areas:**

**What’s Been Accomplished as of 2019?**

- **81% of CCBHCs use case management and care coordination.**
- **90% of CCBHCs offer ambulatory detox for pregnant women. Both of these are new services due to CCBHC funding.**
- **94% of CCBHCs have increased the number of same-day services.**
- **90% of CCBHCs have increased the number of same-day services.**
